

Mermaid fence

Use a `mermaid` fence for diagrams. Margo assigns deterministic IDs, applies a known Mermaid runtime, and sanitizes the resulting SVG before publication.

Source

```
```mermaid
flowchart LR
 source[Markdown] --> compile[Compile]
 compile --> output[Semantic output]
```
```

Result

Flowchart connecting Markdown, Compile, and Semantic output.

Options

The fence body is Mermaid syntax. Choose the diagram family in the first line (`flowchart`, `sequenceDiagram`, and others supported by the pinned runtime).

Margo owns deterministic IDs and SVG sanitization; arbitrary runtime configuration is not accepted in the document body.

Mermaid fence
