

PDF documents

Margo's PDF path reuses the rendered HTML representation and sends it through an explicitly selected installed engine. The result is a PDF artifact, not a second Markdown implementation.

CLI

```
margo pdf guide.md \  
  --output guide.pdf \  
  --page-size A4 \  
  --orientation portrait
```

The default engine mode is `auto`. Margo can discover an installed Chromium family executable, but it does not download a browser. Use `margo doctor` when you need to see the candidate and capability report.

Page geometry

Page size, orientation, and each physical margin are independently configurable:

```
margo:  
  page:  
    size: Letter  
    orientation: landscape  
  margins:  
    top: 12  
    right: 0  
    bottom: 12  
    left: 0
```

An explicit CLI flag wins over a document preference. A margin of `0` requests full bleed on that edge.

Editorial furniture

Pre-rendered PDFs carry the document identity into the exported artifact. Margo adds the configured logo and site name to the header, then places the document title and `Generated by Margo` in the footer. The furniture is part of the engine-neutral HTML projection, so it remains available without the interactive Goshtoso site shell.

Link policy

PDF output defaults to stripping relative link targets while retaining visible text. Choose `--relative-links resolve --base-url URL` when a resolved public base is part of the export contract.
