

Site report schema

This schema describes the report produced by `margo site --diagnostics json`, including the staged publication result and artifact counts.

Margo site report v1

The JSON envelope emitted by `margo site --diagnostics json`.

artifacts *integer* *

Number of published artifacts.

minimum=0

manifest *string* *

Digest of the exact artifact manifest.

pattern="^[0-9a-f]{64}\$"

pages *array* *

Source-to-output page records.

*

actions *object*

markdown *boolean*

pdf *boolean*

pdfMode *string*

enum=["pre-rendered","client"]

printChartData *boolean*

alternates *array*

*

locale *string* *

url *string* *

authors *array*

canonical *string*

description *string*

documentDigest *string*

pattern="^[0-9a-f]{64}\$"

family *string*

imageOverflow *string*

enum=["limit","allow"]

layout *string*

locale *string*

modifiedAt *string*

output *string* *

Site-relative generated HTML path.

publishedAt *string*

source *string* *

Site-relative Markdown source path.

tags *array*

| | **title** *string*

policy *string*

Digest of the trusted host policy when one was supplied.

schemaVersion *value **

const="margo-site-report/v1"

Used by

- The `margo site` JSON output.
- Build pipelines that verify a publication before deployment.
- `margo schema site-report`, which emits the exact embedded bytes.
